Mitsubishi Electric Produces 40,000th Uninterruptible Power Supply Module

Contributing to the stable operation of critical facilities worldwide

TOKYO, March 28, 2016 – [Mitsubishi Electric Corporation](http://www.MitsubishiElectric.com/) (TOKYO: 6503) announced today that it produced its milestone 40,000th Uninterruptible Power Supply (UPS) unit in February 2016.

UPS are used as back-up power supplies for essential facilities like data centers and financial institutions, where a stable and continuous power supply is necessary to protect critical computers, communication equipment and control systems that would otherwise be vulnerable to blackouts or sudden voltage drops. UPS units charge batteries from an AC power source during normal operations and then supply the charged electricity in the event of a power interruption.

Early UPS Unit

Latest UPS (1×500kVA)

Mitsubishi Electric has been producing UPS since 1964, supplying critical facilities in Japan since 1965 and around the world since 1985. The products have garnered a reputation for high reliability and value that has made Mitsubishi the top domestic manufacturer and allowed the company to capture the top market share in

Japan for the last 20 years.

Going forward, Mitsubishi Electric intends to contribute to electricity infrastructure worldwide through further improvements in product performance, reliability and maintenance.

Milestones in Production of UPS

1964	Itami Works begins UPS production
1965	The first unit shipped domestically
1979	Production transferred to Kobe Works
1985	The first order received by Mitsubishi Electric Sales America Overseas UPS business started
2001	10,000th unit produced
2007	20,000th unit produced
2012	30,000th unit produced
2015	50 th anniversary of domestic UPS business, 30 th anniversary of overseas UPS business
2016	40,000th unit produced
